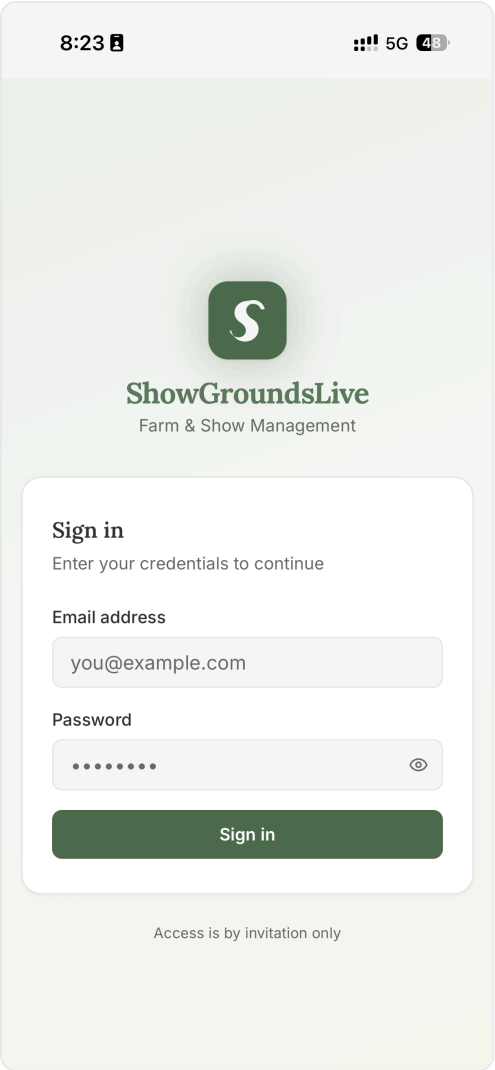
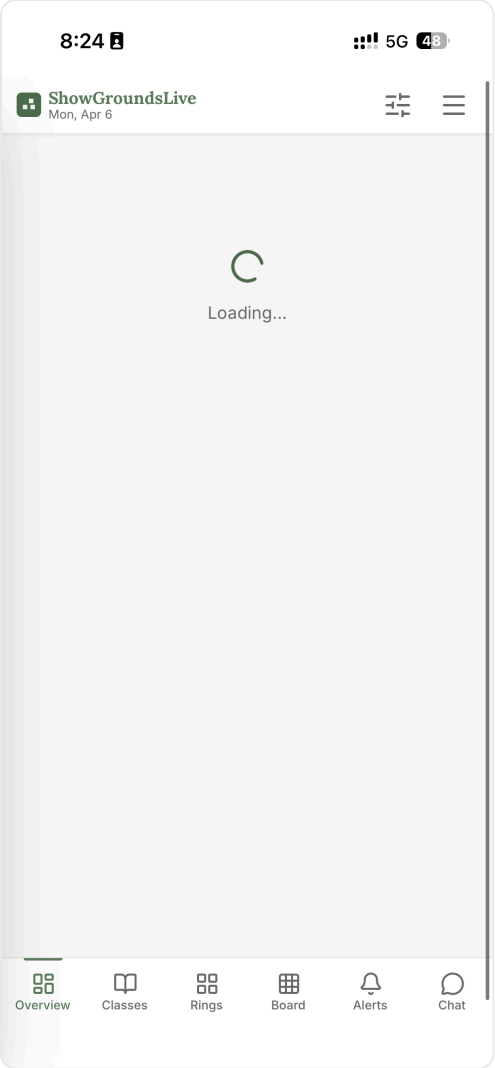
ShowGroundsLive — Mobile app features

App access & sign in



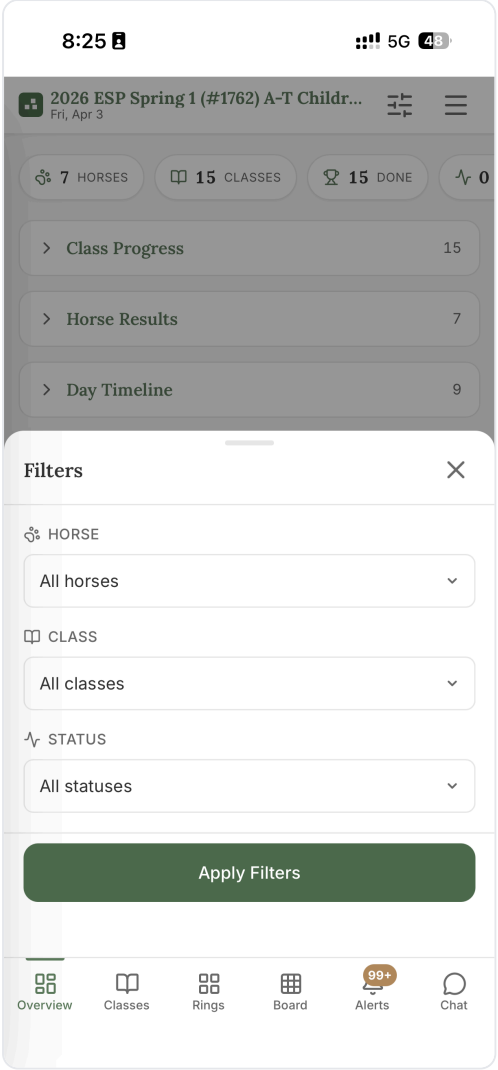
What you see	What it does
ShowGroundsLive branding	Identifies the product (farm & show management).
Email & password	Users sign in with Supabase email/password authentication.
Show / hide password	Toggles password visibility on the device keyboard form.
Error messages	Displays authentication errors from the server (e.g. wrong password).

Main mobile layout (header, tabs, loading & errors)



Feature	What it does
Top header	Shows the **show name** (or “ShowGroundsLive” if none), **selected show date** (weekday + month + day), **filter control** (sliders icon), and **menu** (hamburger).
Filter dot	A small indicator appears on the filter button when horse, class, or status filters are active.
Bottom tab bar	Primary navigation: **Overview**, **Classes**, **Rings**, **Board**, **Alerts**; **Chat** appears only when chat is enabled for the user/farm.
Alerts badge	The Alerts tab can show a numeric badge (up to “99+”) reflecting how many notifications are loaded for the current context.
Loading state	Spinner and “Loading…” while schedule data is fetched.
Error banner	Red banner at the top of the content area when data loading fails.

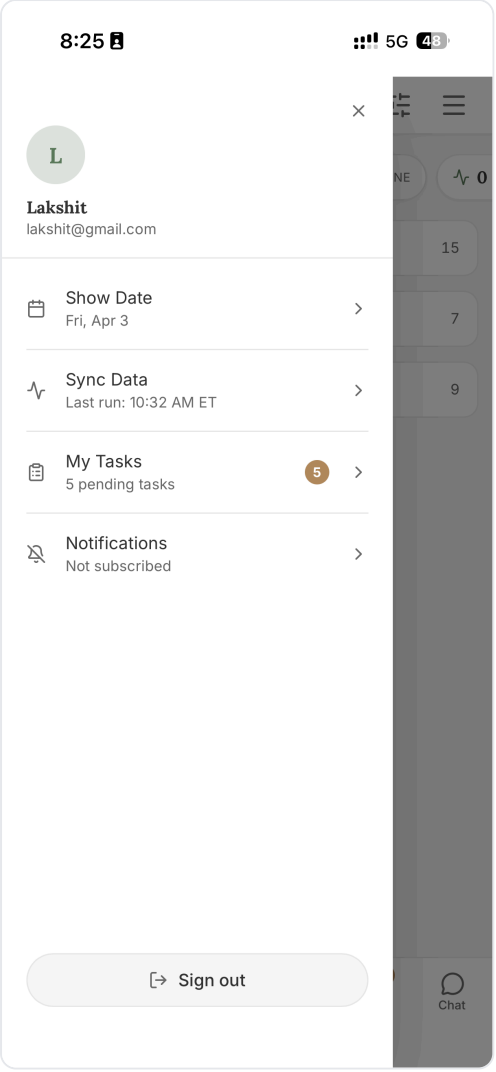
Filters (bottom sheet)



Feature	What it does
Horse	Restricts schedule views to one horse (searchable list when many options).
Class	Restricts to one class name (searchable when many options).
Status	Filters entries by high-level status: not started, underway, or completed.
Apply Filters	Saves choices and closes the sheet.
Clear All	Resets all three filters (shown when any filter is set).

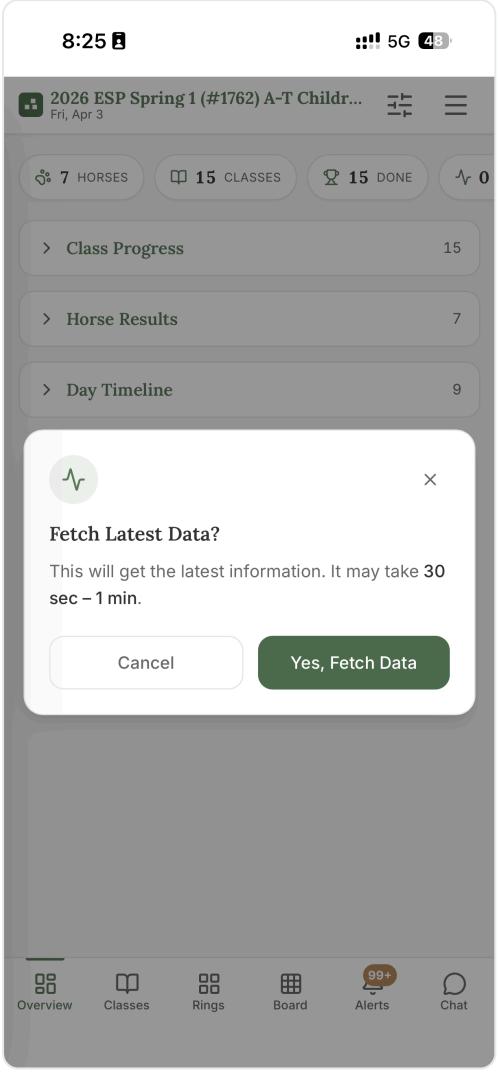
Filters apply across **Overview**, **Classes**, **Rings**, and **Board**. Notification history can also be filtered when linked to schedule entries.

Menu drawer (hamburger)



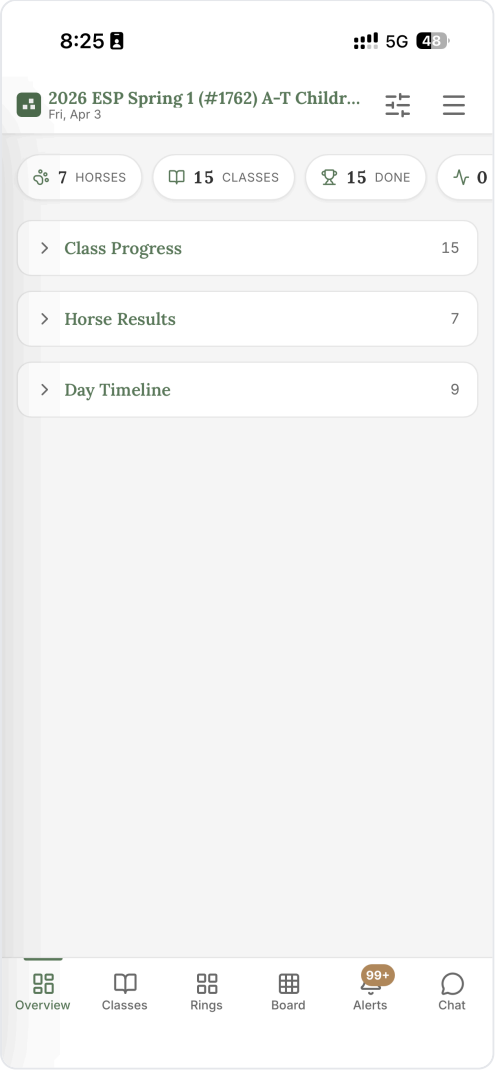
Feature	What it does
Profile block	Avatar initial, display name, and optionally email.
Show date	Opens a **native date picker** to change which day's schedule and alerts load; closes the drawer after selection.
Sync Data	Opens a confirmation step, then triggers a **class monitoring / data sync** request so the app can pull the latest updates. Shows **last run time** when available (trimmed to a short time + "ET").
My Tasks	Opens the full-screen **Tasks** experience; subtitle shows **pending task count** when greater than zero.
Notifications	Opens **notification settings** (push master toggle and per-category preferences). Shows whether this device is subscribed.
Sign out	Ends the session and returns to the sign-in screen.

Sync confirmation



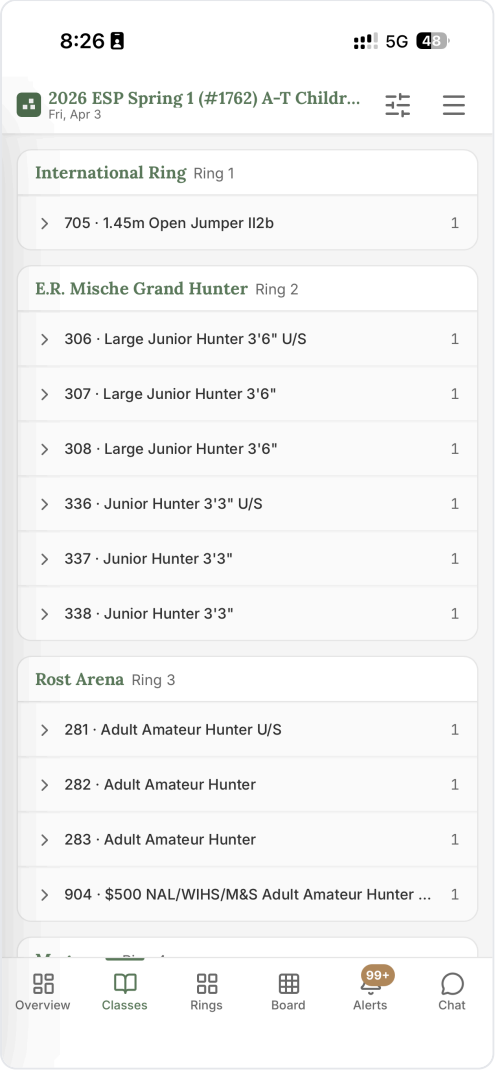
Feature	What it does
Confirm / cancel	Prevents accidental sync; user must confirm before the sync action runs from the drawer.

Tab: Overview



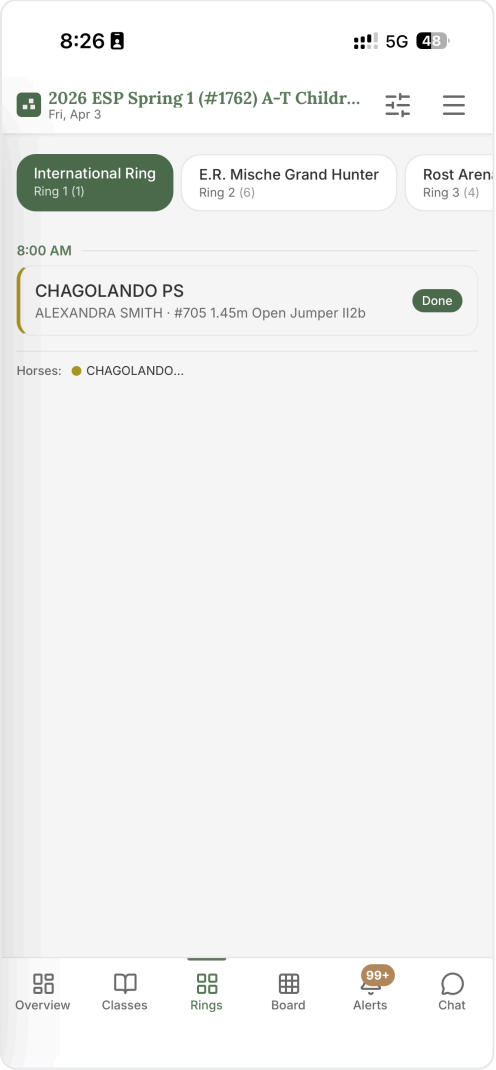
Feature	What it does
KPI strip	Horizontal chips for **Horses**, **Classes**, **Done** (completed entries), **Active**, and **Prize** (total prize money summed for visible entries).
Class Progress	Collapsible list: per-class **completed trips vs total trips** with a progress bar.
Horse Results	Collapsible list grouped by horse; expand a horse to see per-class **placing**, **best score**, **faults**, **prize money**, and **status** coloring.
Day Timeline	Collapsible timeline by **time of day**: which horses run in which classes, with status dots.
Empty states	Messages when there is no schedule for the date, or no rows match the current filter.

Tab: Classes



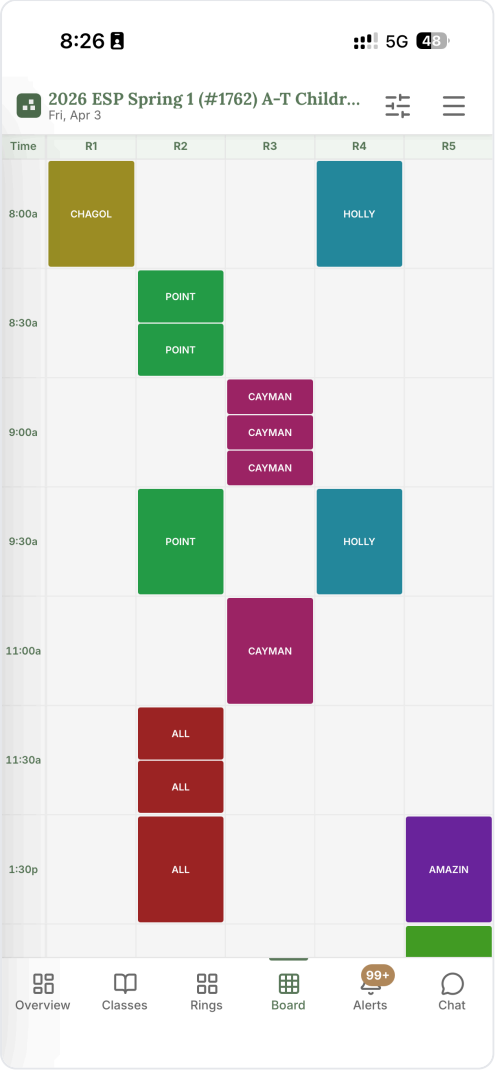
Feature	What it does
Events & rings	Each event shows its name and **ring number** when present.
Expand class	Tap to open a class; shows **entry count**.
Entry rows	Compact row: **time**, **horse**, **status badge** (Done / Active / Next / Off), expandable for details.
Entry detail	**Rider**, **class**, **class status**, **estimated start**, **placing**; **Results** (trips, points, prize); **Rounds** (faults/time per round); **Scores** (multiple score columns when present).
Not in class	When filters are off and the API returns them, an expandable **"Not in class"** section lists horses marked inactive / off-schedule with rider and badge.
Filter empty state	Dedicated message when filters exclude all entries.

Tab: Rings



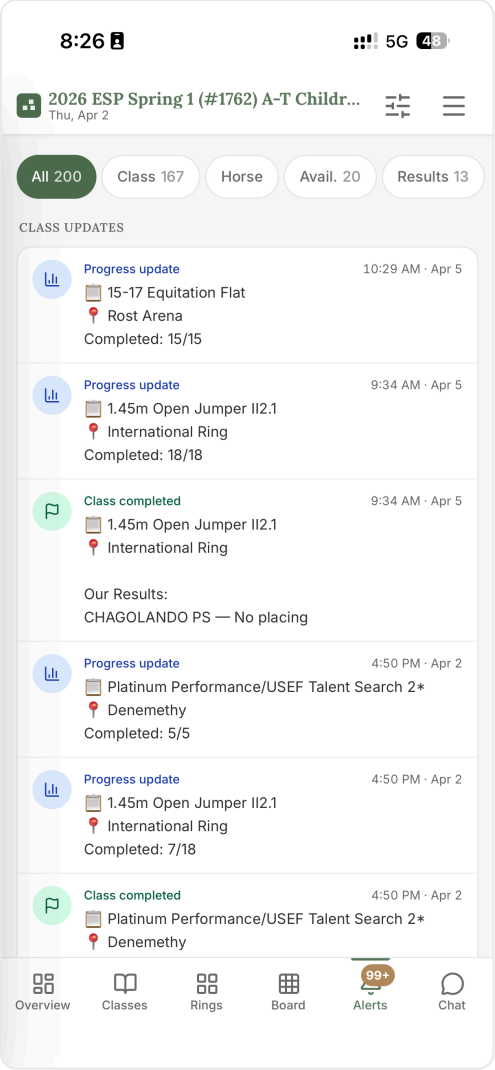
Feature	What it does
Ring selector	Horizontal pills to switch **ring (event)**; each shows venue/event title when available, ring number, and entry count.
Timeline	Ordered list by **scheduled time**: horse, rider + class, **placing** if known, and **status** pill (Done / In progress / Upcoming / Inactive).
Horse colors	A **consistent color** per horse (left border) for quick scanning.
Unscheduled	Entries without a parseable time appear under an **Unscheduled** divider.
Legend	Footer shows **horse name ↔ color** samples for entries in the current ring.

Tab: Board



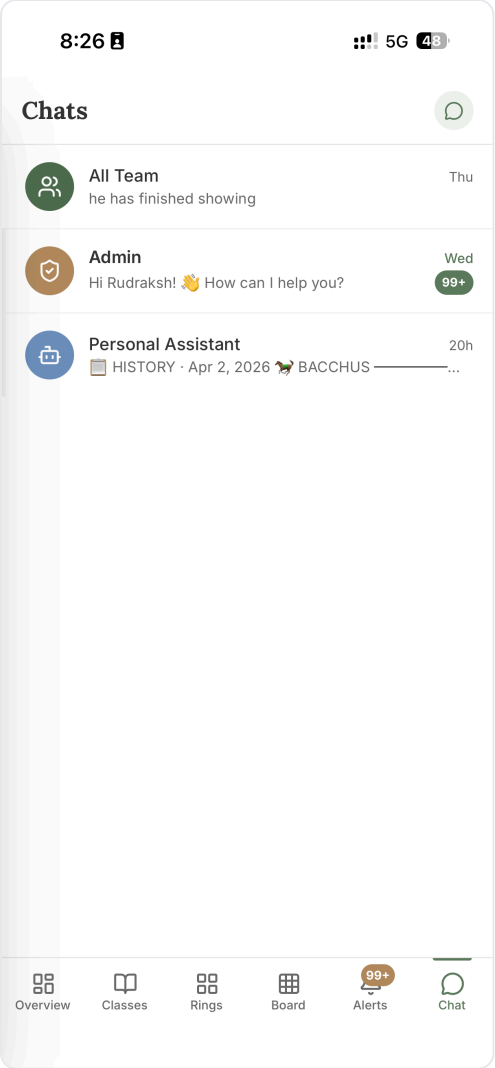
Feature	What it does
Ring × time grid	Dense **timetable**: columns are rings (**R1**, **R2**, …), rows are **time slots** (30-minute buckets) that have at least one entry, plus an **N/A** row for unscheduled items when needed.
Cell chips	Each cell shows an **abbreviated horse name** on a color matched to that horse.
Tap for details	Tapping opens an overlay with **horse**, **rider**, **class**, **time** (or "Unscheduled"), **status**, **placing**, and **back number** when available.
Viewport fit	Layout is sized to fit between the mobile header and tab bar for an at-a-glance arena view.

Tab: Alerts (notifications log)



Feature	What it does
Category pills	**All**, **Class**, **Horse**, **Avail.** (availability), **Results** — each shows counts.
Grouped feed	Notifications are grouped by category with **icon**, **label**, **timestamp** (time + date in the app's display timezone), and **summary** text.
Load more	Fetches the next page of older notifications when more exist.
Empty state	Message when there are no notifications for the selected date.

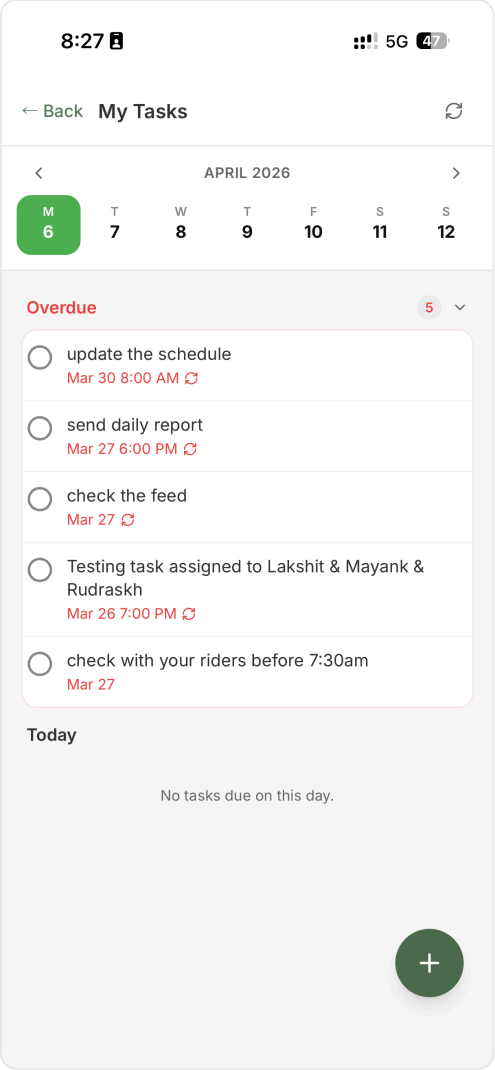
Chat (optional)



Chat is shown **only** when the product configuration and user entitlements allow it (farm + role checks in the app).

Feature	What it does
Channel list	"Chats" screen listing available channels (e.g. **All Team**, **Admin** for admins, **Personal Assistant**). Shows loading skeletons while channels connect.
Conversation	Full-screen messaging powered by **Stream Chat**: custom header with **back**, message list, and input.
Tab bar hidden in thread	While a conversation is open, the bottom tabs are covered so the experience feels like a dedicated chat app.
Errors	If chat cannot connect, user sees an explanatory error state.

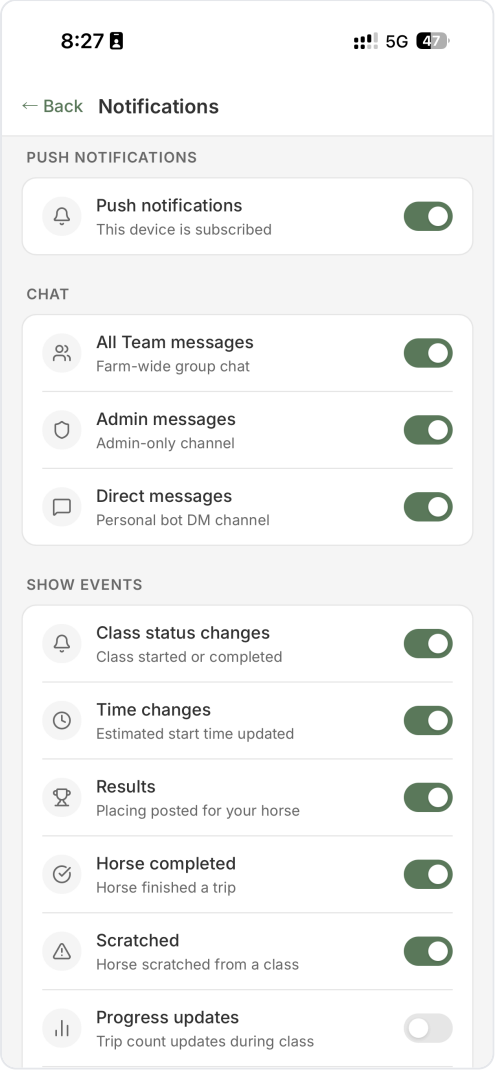
Tasks



Opened from **My Tasks** in the menu drawer (not a bottom tab).

Feature	What it does
Week navigation	Week strip (**Mon–Sun**), arrows to change week, **today** highlighted.
Tasks by due date	Tasks grouped for the selected day; supports **pending** vs **completed** sections.
Overdue	Collapsible section for overdue work (when applicable).
Create / edit	Modals to add or change tasks (assignees, due dates, etc., per task UI).
Refresh	Reloads task data from the server.
Undo	After completing a task, a short **undo** window can revert before the change is finalized.

Notification settings



Feature	What it does
Master toggle (this device)	Subscribes or unsubscribes **push notifications** for the logged-in user on the current device; syncs with backend subscription records.
Per-category preferences	Fine-grained toggles (e.g. class, results, alerts) stored **per user**; categories are disabled visually when the master toggle is off.
Browser permission denied	If notifications are blocked at the OS/browser level, the UI directs the user to change system settings instead of failing silently.
Close	Returns to the mobile shell.

Summary checklist for your client deck

- Sign in (email/password)
- Show-scoped dashboard with **date** selection
- **Six main areas**: Overview, Classes, Rings, Board, Alerts, optional **Chat**
- **Filters**: horse, class, status
- **Menu**: profile, date, sync, tasks, notification settings, sign out
- **Overview**: KPIs, class progress, horse results, day timeline
- **Classes**: hierarchical schedule + rich entry detail + “not in class”
- **Rings**: per-ring timeline with horse colors
- **Board**: multi-ring time grid with tap-for-detail
- **Alerts**: categorized notification log with pagination
- **Tasks**: week-based task management (overlay)
- **Push**: device subscription + category preferences + iOS/home-screen guidance
